Honda SENSING is an Advanced Driver Assistance System (ADAS) designed to help you drive more safely by reducing the risk of accidents. It intervenes to avoid or lessen the impact of a collision. With every advancement we make, we get closer to a world without collision.

### Collision Mitigation Braking System (CMBS)

Provides audio & visual warning alerts and applies brakes when there is a risk of collision.

### Adaptive Cruise Control with Low Speed Follow<sup>#</sup>

Accelerates and brakes to keep you at a safe distance from other cars while cruising. Low speed follow makes it easier to drive in stop-and-go traffic.

### Lane Keeping Assist System (LKAS)

It steers the wheel to keep you in the middle of the lane while cruising along the highway.

### Road Departure Mitigation System

When the car seems to deviate from road boundaries, it gives audio-visual alerts with steering wheel support.

### Auto High-Beam

Improves visibility by automatically switching between low and high beam.

### Lead Car Departure Notification System

It notifies you when the car ahead starts moving.
